

## NORTHWEST FLORIDA SPECIES LIST

This list, which contains shells found in the onshore and offshore waters of the Florida Panhandle, was prepared by the members of the Gulf Coast Shell Club. The list is arranged alphabetically by family and then by genera within the family. The numbers in the Ref. Nr. column refer to the corresponding species as found in *American Seashells, Second Edition* by Dr R. Tucker Abbott. An asterisk indicates that a name change to the family, species, genus, (any or all) has occurred since the initial publication of that work. Columns for the common name for the shell and its normal adult size range are included. For information on superscripted items see "End Notes". There are 650 shells (including variations, "v") on this list as of the latest update on January 1, 2018. Our thanks go to Dr. Harry Lee of the Jacksonville Shell Club for his assistance in this compilation. A caution: Any list of this type is subject to frequent name changes as the science involved progresses.

### END NOTES:

<sup>1</sup>: Shells annotated with a superscript 1 indicate "variety" (see 6d below) names that may or may not be valid but are useful for identification.

<sup>2</sup>: Shells annotated with a superscript 2 are shells from the 1994 Keeler and Robertson survey of the Apalachicola Marine Estuary and immediate offshore areas and represent species not currently in the possession of GCSC members but that are deemed native to our area. Type material was not seen in this preparation.

<sup>3</sup>: *Chicoreus dilectus* (A. Adams, 1855) has been synonymized to *Chicoreus florifer* (Reeve, 1846). We retain both as separate species.

<sup>4</sup>: There is current controversy if this is *T. giganteus* or *T. papillosus* (G. B. Sowerby I, 1825).

<sup>5</sup>: This may be the same species as *C. sinuosa* A. Adams, 1850 as both possess the same synonym.

<sup>6</sup>: Abbreviations used:

- a. sp. and spp.: Species and its plural.
- b. cf.: "confer" from Latin meaning "compare to".
- c. aff.: "affinis" from Latin meaning "similar to".
- d. v.: "Variety", a shell visually different from the norm but not regarded as a separate species; often useful in identification.
